

Power BI Assignment 2 – DAX & Data Visualization

DAX Calculations

Calculated Columns

1.Create a Calculated Column for 'Category Type': Add a calculated column in the Order Details table that combines the 'Category' and 'Sub-Category' columns into a single 'Category Type' column.

Go to **Order Details** table → **Table tools** → **New Column**.

Category Type

DAX

Category Type = 'Order Details'[Category] & " - " & 'Order Details'[Sub-Category]

Order ID	Amount	Profit	Quantity	Category	Sub-Category	Order Month	CategoryMonthKey	Category Type
B-25602	567	212	3	Clothing	Saree	Apr-18	Clothing-Apr-18	Clothing - Saree
B-25602	119	-5	8	Clothing	Saree	Apr-18	Clothing-Apr-18	Clothing - Saree
B-25603	193	-166	3	Clothing	Saree	Apr-18	Clothing-Apr-18	Clothing - Saree

2.Calculate Revenue per Order in Order Details Table: Create a calculated column in the Order Details table to compute the revenue (Amount * Quantity) per order.

Revenue per Order

DAX

Revenue = 'Order Details'[Amount] * 'Order Details'[Quantity]

File Home Help **Table tools** Column tools

Name Order Details

Structure Relationships Calculations Calendars

1 Revenue = 'Order Details'[Amount] * 'Order Details'[Quantity]

Order ID	Amount	Profit	Quantity	Category	Sub-Category	Order Month	CategoryMonthKey	Category Type	Revenue

Calculated Measures

1. Order Count- Create a measure that calculates the total number of orders in the Order Details table.

DAX Measures

Go to Order Details table → Table tools → New Measure for each.

Order Count

Since Order Details has one row per line item, use distinct count so it means "number of orders," not "number of line items":

DAX

Order Count = DISTINCTCOUNT('Order Details'[Order ID])

The screenshot shows the Microsoft Excel interface with the 'Table tools' ribbon active. The formula bar displays the DAX measure: `1 Order Count = DISTINCTCOUNT('Order Details'[Order ID])`. Below the formula bar, a data table is visible with columns: Order ID, Amount, Profit, Quantity, Category, Sub-Category, Order Month, CategoryMonthKey, Category Type, Revenue, and Sales Category. The table contains 20 rows of data. On the right side, the 'Data' pane is open, showing a search bar and a list of fields including 'Order ID', 'Order Month', 'Category', 'CategoryMonthKey', 'Order Count', 'Revenue', 'Sales Category', and 'Sub-Category'. The 'Order Count' field is highlighted in the list.

Order ID	Amount	Profit	Quantity	Category	Sub-Category	Order Month	CategoryMonthKey	Category Type	Revenue	Sales Category
B-25602	561	212	3	Clothing	Saree	Apr-18	Clothing-Apr-18	Clothing - Saree	1683	Above Average

Create the min-target measure:

DAX

Min Target = MIN('Sales target'[Target])

The screenshot shows the Microsoft Power BI Desktop interface. At the top, the 'Name' field is set to 'Min Target', the 'Format' is 'Whole number', and the 'Data category' is 'Uncategorized'. Below this, the 'Home table' is 'Sales target'. The DAX formula bar shows the formula: `1 Min Target = MIN('Sales target'[Target])`. The main area displays a table with the following columns: 'Month of Order Date', 'Category', 'Target', and 'CategoryMonthKey'. The table contains data for various dates and categories, including Furniture, Clothing, and Electronics. On the right side, the 'Data' pane shows a list of fields, with 'CategoryMonthKey' and 'Min Target' highlighted.

Month of Order Date	Category	Target	CategoryMonthKey
Saturday, April 18, 2026	Furniture	10400	Furniture-18/04/2026
Monday, May 18, 2026	Furniture	10500	Furniture-18/05/2026

Friday, December 18, 2026	Electronics	9000	Electronics-18/12/2026

- Visual: Multi-row Card
- Fields: Segment/State (use List of Orders[State] if no Segment column exists) and Min Target

Note: your dataset has no explicit "Segment" column — use State in its place, or mention in your PDF that Segment was substituted with State since it isn't present in the source data.

Multi-Row Card is not available in my Power BI, so unable to complete this task.

Sales Performance Matrix: Build a matrix view to analyze how actual sales compare to sales targets across different categories and months.

Sales Performance Matrix

- Visual: Matrix
- Rows: Order Details[Category]
- Columns: Sales_target[Month of Order Date]
- Values: SUM(Order Details[Amount]), SUM(Sales_target[Target])

Year	2026				Total	
Category	Sum of Amount	Sum of Target	Sum of Amount	Sum of Target	Sum of Amount	Sum of Target
Electronics	165267				165267	129000
Clothing	139054				139054	174000
Furniture	127181				127181	132900
Total	431502			435900	431502	435900

Geographic Sales Analysis: Visualize total sales on a map by city to identify regional sales patterns.

Geographic Sales Analysis — Map

- Visual: Map (or Filled Map)
- Location: List of Orders[City]
- Size/Bubble value: SUM(Order Details[Amount])

If bubbles don't render, go to City column → Column tools → Data Category → set to City.

Sum of Amount by State

Sales Distribution by Sub-Category: Represent the sales distribution across different

- sub-categories using a tree map.

Sales Distribution by Sub-Category — Treemap

- Visual: Treemap
- Group: Order Details[Sub-Category]
- Values: SUM(Order Details[Amount])

Sum of Amount by Sub-Category

Order Count Analysis by State: Create a funnel chart to visualize the distribution of order counts across different states.

Order Count by State — Funnel Chart

- Visual: Funnel
- Category: List of Orders[State]
- Values: Order Count

Order Count by State
